

LED Pump Top Price Signs

Many states and local municipalities are now requiring that up-to-date fuel prices be posted directly at the pump. While many fuel retailers resort to installing outdated, inefficient, manual signs, Skyline provides a fully electronic and efficient solution.

LED Pump Top signs keep your store in compliance, without the headache of manually changing every pump top price. Plus, Skyline's Pump Top LED signs easily integrate with most POS systems as well as existing signage already at the store.

With a fast turnaround, your store can experience increased speed-to-the-street while remaining compliant in a matter of weeks.

Confidence In Accurate Pricing

Our patented feedback process ensures that the right price is showing at all times. Skyline's customers enjoy up-to-the-minute feedback and diagnostic with the most robust feedback and diagnostic system on the market. Plus, by using PriceAdvantage Sign Diagnostics, users can have access to diagnostic information from headquarters.

PRODUCT SPECS

- Available with 4 1/2" or 9" LED digits and in single or double face configurations
